

RAHUL PANDIT

Seattle, WA | rahul.pandit@live.com | [linkedin.com/in/rahulapandit](https://www.linkedin.com/in/rahulapandit)

EXECUTIVE PROFILE

Expert in Scaling Global AI/ML Platforms and High-Transaction Systems. Deep technical leadership experience (VP/Director level) in building, optimizing, and operationalizing multi-billion dollar consumer platforms within highly regulated environments (Health, Telecom, Consumer AI). Proven ability to own the full architectural lifecycle from defining data governance models and designing petabyte-scale ingestion pipelines to deploying real-time Generative AI agents.

Core Expertise:

- MLOps & GenAI Architectures (LLMs, RAG, Vector Databases)
 - High-Throughput Distributed Systems (EKS/Kubernetes, Kinesis/Kafka)
 - P&L Ownership of Core Platform Services (Fraud Detection, Billing Ledger)
 - AWS Cloud Infrastructure (S3, Lambda, SageMaker, API Gateway)
-

PROFESSIONAL EXPERIENCE

Vice President, Engineering - Augment Me | Oct 2023–Present

Pioneered the end-to-end development and commercial deployment of proprietary, multi-modal AI platforms spanning advanced healthcare biometrics and educational behavioral analysis

- **Multi-Modal Streaming Pipeline Architecture:** Engineered scalable MLOps platform with API Gateway to ingest, fuse, and process complex multimodal data streams (Audio/Video/Screen Capture). The core system integrates physiological signal processing (rPPG/PPG) alongside behavioral telemetry to analyze metrics like Heart Rate Variability (HRV) and Stress Index in real-time.
- **Deep Learning Behavioral Analytics:** Directed the development of specialized deep learning pipelines for educational assessment, moving beyond single-sensor data. This involved advanced optical imaging signal processing to quantify group dynamics, student engagement levels, and identify pedagogical interventions from live video feeds.
- **FDA Pathway:** Established the technical charter for non-contact diagnostic technology supporting an FDA clearance pathway. Built a rigorous validation framework to compare proprietary model outputs against medical-grade instrumentation, ensuring full data provenance and auditable decision support logs required for Class II device submissions.
- **Platform Security & Reliability:** Lead the enterprise AI platform powering production LLM and agentic applications across a multi-cloud environment. Defined the organization's AI quality governance model, introducing measurable quality standards, automated release gates, audit readiness, and continuous operational oversight.
- **Commercial Scaling & Adoption:** Led enterprise adoption of AI-Powered Learning solution with key partners (e.g., **Mynd AI**), achieving commercial validation and proving operational scalability. **(Selected to Stanford StartX AI Cohort | Featured at TechCrunch Disrupt 2024).**
- **Agentic Team:** Managed small but mighty team of 15 AI Builders leveraging integration of Agentic workflows into core product for maximum impact.

Executive Director, Engineering - Visible.com | Nov 2020– July 2023

Held P&L ownership across engineering, architecture, fraud mitigation, and DevOps for a fully digital wireless carrier.

- **Modernization & Cloud Migration:** Orchestrated the migration of critical legacy 4G Telecom monolith into a new modular architecture with 5G cloud-native Telecom API and an event-driven microservices platform that could scale across multi-cloud providers and avoid vendor lock-in.
- **Revenue & Cost Optimization:** Owned P&L for Engineering team and delivered on key growth levers (eSIM activation, automated referrals) by developing high-throughput APIs (via API Gateway) and optimizing network provisioning workflows. This overhaul contributed to a 30% reduction in operating costs while driving triple-digit revenue growth.
- **Privacy & Fraud Mitigation:** Designed and implemented real-time fraud detection services that processed streaming data inputs from the transaction ledger, significantly reducing account takeover, identity abuse and chargeback rates by 15% through advanced pattern recognition models.

Amazon.com (Alexa AI) – Senior Engineering Manager | Feb 2014–Nov 2020

Oversaw core platform components managing ML-based services and massive consumer scale.

- **Global Skill Architecture:** Directed a cross-discipline organization (30+) responsible for Alexa's real-time LLM inference platform, personalization engine, and autonomous agent systems serving 200M+ customers worldwide.
- **Natural Language Processing (NLU):** Drove the transition from traditional intent classification models to Deep Neural Networks (DNNs) for NLU. Managed the end-to-end MLOps lifecycle using AWS SageMaker, resulting in a measurable increase of 17% lift in core intent resolution accuracy.
- **Core Functionality:** Led Alexa's proactive intelligence engine, conversational suggestions, and visual understanding - full-stack ownership from model to serving layer.
- **Platform Scaling:** Architected and operated Alexa's real-time LLM inference pipeline: low-latency, globally distributed, handling conversational AI at global scale under strict availability SLAS. Managed platform growth from a greenfield stage through development into global General Availability (GA), supporting Amazon's rapid expansion across diverse device families and international locales.

Amazon Rentals - Software Development Manager

Founded and scaled a greenfield B2C logistics and revenue platform integrated with core Amazon Retail services.

- Built the full technical stack for pricing, inventory selection, multi-state logistics integration, and complex revenue-sharing ledger capabilities.
- Scaled distributed engineering teams across US and India while building resilient cloud infrastructure capable of supporting nine-figure annual transaction volumes.
- Built a high availability and performant team (45+) distributed across US/India with Follow The Sun strategy.

Amazon Kindle Devices - Software Development Manager

Led device software architecture teams (25+) across multiple product families (Kindle/Fire), overseeing platform development and feature parity for diverse global locales.

EDUCATION

Bachelor of Engineering, Computer Technology - YCCE, India
